Tim Sundell
Front End Developer student

Front End student at Medieinstitutet in Stockholm in search of LIA/internship.
I have a passion for creating software and adapt/learn new things
in an industry that is in constant development, I am open to either become and expert in some of the areas I will already master by the time we make acquaintance, Or learn a new language/framework/version control that you use. On my spare time I like to watch ice-hockey, go on walks with my dog and hiking.

Experience

Oct 2022 - jun 2024
Medieinstitutet Stockholm
Front End Developer

I study a 2 year program and I will have my exam by june 2024. Some of the skills I will master you can see at the "skills in progress" bar to the left.

Testning (Jest, Cypress)15p		/ 3v

🤝 = This is when I would like to see you!

Mar 2015 - dec 2022
Scania Industrial maintenance AB
Administrator

I worked as an administrator at "Scanias "Ordercentral" with the administrative work order flow for facility and production maintainance. Everything from registration until billing. Also as an intermediary for all questions regarding ongoing assignments between customers and executing departments. The Ordercentral work as a filter and as a support team to ensure quality for the majority of incoming and outgoing work orders in Södertälje, Luleå and Oskarshamn. At this position I worked daily in smaller teams with the computer playing a central role. Our main program was IBMs Maximo. which is built of an SQL database. Sometimes we needed to use SQL queries to make filters in order to find what we were looking for.

Jun 2012 - jan 2014
Lantmännen Cerealia Ab
Process Operator

As a process operator I had a crucial role in the production flow at the Lantmännen Factory in Järna. I was the link between the team that produced the products and the team that was in control of the packaging. I did this by making sure there was always a constant flow of materials on every line and so every compartment could do there tasks simultaneously even though they where at differents steps in the whole productions process. This is something I hope I can apply in the world of web development aswell, where it's crucial to work agile to finish things before dealine.
